30

sec. : ⌘

300

sec. : ⌘⇧

### ☒ Use key-frame seeking (FFmpeg only)

Key-frame seeking is fast but may be inaccurate because it goes to the nearest key frame. If you want accuracy, turn it off. However, higher video resolution means slower seeking.

This option is only for single seeking by a key stroke or mouse click. Continuous seeks by key repeat or mouse dragging always go to key frames. The others (like range-repeat) always go to accurate frames.

Speed adjustment unit:

0.1x

☒ Show bookmarks in seek slider

☒ Show chapters in seek slider

☒ Show chapter in time tool-tip

☒ Show thumbnail in time tool-tip (re-open needed)

☒ Show thumbnails in Touch Bar (re-open needed)

## Advanced

☒ Disable I/O cache for network volumes (afp, smb, ftp)

If you are having trouble playing media on a network volume, it might be helpful to change this option.
