About

Startup: ☒ Launch Bartender at login

Start Bartender automatically at login.

Activation: ☒ Clicking on the menu bar will show/hide menu bar items

When you click on empty space in the menu bar Bartender will toggle showing hidden items.

☐ Moving the mouse into the menu bar will show hidden menu bar items

Delay before activating:  0.2 Seconds

When the mouse hovers over the right side of the menu bar, hidden items will show.

Bartender Bar: ☐ Use Bartender Bar to show hidden items ☐ Only on screen with Notch

Bartender will show your hidden menu bar items in the Bartender Bar beneath the menu bar. Clicking a menu bar item in the Bartender Bar will reveal it in the menu bar and activate it. The menu bar item will autohide again after approx 30 seconds.

Autohide: ☐ Automatically hide menu bar items again after showing them

Bartender can autohide shown hidden items when you click elsewhere or use another app. When unselected, menu bar items remain visible, until hidden again by click Bartender or using a hotkey.

Bartender menu bar icon: 

• Dot

If using your own image please choose an appropriate image for a light or dark menu bar.

Bartender menu bar item: ☒ Visible ☐ Show Hidden Item Divider ( ◀ )

If the Bartender menu bar item is hidden, you can still access Bartender using the hot keys or by launching Bartender again to bring up Preferences.

Menu bar item spacing: 

⋮

 Default Spacing - macOS Big Sur default

Reduces the space between menu bar items. You must log out and back in or restart macOS for this change to take effect. Bartender must be set to start at login.

With multiple screens: ☐ Hide all menu bar items on inactive menu bars

☐ Show all hidden items if active screen is bigger than:

↓ BenQ PD3200U

 3,000 pixels wide

Bartender 3 style: ☐ Hide items to the left of Bartenders menu item when showing hidden items

Increase the available space to show menu bar items by hiding normally shown items that are to the left of the Bartender menu item when showing hidden items. NOTE: Activate on mouse over and autohide will be disabled.

## About

**Drag your menu bar items to arrange them as you want.**

### Shown menu bar items

## Hidden menu bar items

New menu bar items appear here

## Always Hidden menu bar items

**Menu bar items palette. Drag from here to the 3 locations above**

**Add a Spacer**

Drag your menu bar items to the Show menu bar items section to have them shown in the menu bar.

Drag menu bar items to the Hidden menu bar items section to have them hidden, but shown when activating Bartender.

Drag menu bar items to the Always Hidden menu bar items section to have them always hidden.

Set the position of new menu bar items by moving the New Menu Bar Items pill to any location.

Add spacers between menu bar items by dragging the Add Spacer to where you want, then click the spacer to adjust its size, and text.

You can also arrange the menu bar items quickly by **⌘ +** dragging them in the menu bar.

About

When on battery power: ☐ Decrease show for update checking

If set when on battery power Bartender will check menu items for updates less often, items set to show for updates may not show up as quickly when they change, but will make energy usage very minimal.

To show all menu bar items: ☒ Remove Application menu when needed

If any revealed items would be hidden by the current applications left menu (when they are being shown), Bartender will remove the applications menu.  
Due to a limitation in macOS, Bartender's dock icon will be visible while the left menu is removed.

Notifications: ☐ Show when moving menu bar items

Dragging menu bar items: ☒ Show all menu bar items to allow moving to hidden items

Updates:

Check For Updates...

☒ Check for Updates Automatically

Automatically check for Bartender Updates.

☐ Update to Test Builds, even though they may be unstable

If you take Test Builds please understand they may contain bugs, or cause issues.  
Any feedback you can provide is always greatly appreciated.

Current Version: 4.1.40
